

The Sandcrawler Lucasfilm HQ

Singapore, Singapore

The combined forces of Lucasfilms and Aedas create the Sandcrawler

The brand new headquarters of Lucasfilms in Singapore was created by Aedas and has already received several architectural awards, including the Gold MIPIM Asia Awards and the Chicago Athenaeum International Architecture Award. It has been formally dubbed the CX2-1, and is already well known as the Sandcrawler - the vehicle the Jawas from Tatooine used in "Star Wars" - thanks to the impressive and iconic shape. The eight floors adapt to the perimeter thanks to a horseshoe shape, which contains within it a lush garden.

Technical details:

Name: The Sandcrawler -
Lucasfilm HQ

Location: Singapore, Singapore

Year of development: 2012

Venues: Cinemas and Corporate

Architecture: AEDAS

Product: 13114 RK

It was built along energy efficient lines and with protection from sunlight, while ensuring the maximum availability of natural daylight in the interior. The Sandcrawler features see-through architecture thanks to the high performance glass enclosures all around its perimeter. The interior design is modern but friendly, offering creative work environments. Each floor has its own terrace for dissipating heat, which helps keep the climate of Singapore at bay.

Product supplied

One of the jewels in the crown of this building is its high-tech auditorium for 100 people, in which internal projections; releases or conferences will be held. The seats chosen, RK 13114 are a special model by Figueras. They feature a tilting device, which can't be felt until the user sits on it. It was this feature that led Aedas to choose this chair. Moreover, given that the seat and back are finished in wood, it offers a theatrical aesthetic with the performance of the recliner armchair in cinemas.
