

NBA Players Performance Seating

Seats that provide
players a competitive edge.

Figueras has revolutionized the seating game with our innovative and patented Players Performance Seating system which is precisely designed and engineered to deliver comfort and increase performance.

Figueras Players Performance Seating maintains proper body posture avoiding deep hip flexion, with each chair electronically adjustable for height, as well as variable heating in both the seat and back cushion providing an enhanced result for every player.

Technically advanced. Feature rich. Easy to use.

Developed by Dr. Troy Flanagan, VP of Performance for the Milwaukee Bucks, along with the University of Colorado and other top institutions – it's the most carefully researched, designed and engineered seating system available for NBA and NCAA basketball teams.

The first of its kind and proven to optimize performance – studies on elite track cyclists have shown that keeping muscles warm improves power output. Research by the CU Department of Mechanical Engineering found that using heated chairs to maintain muscle temperature after warm-ups enhanced counter movement jump performance in college basketball players.

Adjustable height tailors each chair to individual players size.

Variable heating in the back and seat maintains muscle temperature.

With 9.6" of adjustable height and variable heating controls – trainers, medical staff and players can personalize the seat to manage ideal body alignment and optimal muscle temperature for maintaining peak performance.

Safety has been designed in.

The number one design factor in our Players Performance Seating is safety – in the event of a collision, they are soft, padded, safe and low-voltage. Engineered for durability and stability, attention to specifics such as tip-over and pinch points have been addressed.

Features

- 1 Robust protective back shell
- 2 Durable anti-microbial material
- 3 Integral Form Process™ integrates upholstery and foam into a monobloc system
- 4 Variable height and heat controls
- 5 Complete internal steel structure and support system
- 6 Sealed controls are rugged and replaceable
- 7 Seat design engineered for excellent ergonomics
- 8 Lifetime structural chair warranty
- 9 Highly stable base with multiple lift points for forklifts and hand trucks
- 10 Optional adjustable wheels available
- 11 110 Volt cord plug in
- 12 Modular components for ease of maintenance
- 13 Variable height limitation for site conditions
- 14 Over 400 lb. weight load per seat
- 15 No pinch points between seats
- 16 Minimal height from floor – similar to folding chairs

Individualize your seating system.

Style your seat with choices of embroidered, embossed or debossed logos. Choose seating modules from 2, 3, or 5 seats each. Select from a choice of anti-microbial fabrics and materials. Matching fixed side chairs for coaches and trainers are available to complement your seating system.
